Epson Stylus™ Pro 7900/9900

Revolutionising Colour Possibilities in Professional Large Format Printing

- Epson UltraChrome™ High Dynamic Range (HDR) maximise colour expansion with its revolutionary 10-colour inks set
- New Micro Piezo TFP™ Print Head delivers with superb speed and is built with extreme durability
- Optional SpectroProofer™ for repeat proof verification and printer calibration solutions

OPENING A NEW ERA IN COLOUR REPRODUCTION

Epson Stylus™ Pro 7900/9900

Featuring new Epson UltraChrome™ HDR Ink and Advanced Micro Piezo TFP™ print head, Epson Stylus™ Pro 7900/9900 delivers industry-leading performance in higher accuracy and higher quality colour printing.

Epson UltraChrome™ High Dynamic Range (HDR) Ink

Having improved inkjet printing quality with Epson UltraChrome™ K3 ink, Epson once again raises the standard for pigment ink performance with Epson UltraChrome™ HDR, featuring two extra colours. In addition to the eight colours previously offered, Epson UltraChrome™ HDR now includes Green and Orange inks, providing a significantly larger colour gamut, along with the ability to print vivid green and orange tones. Furthermore, Photo Back and Matte Back ink cartridges can both be installed at the same time.

As the name Epson UltraChrome™ HDR implies, this new ink set provides a much wider tonal range, which means higher colour accuracy, greater colour subtlety and smoother tonal gradation. No matter what type of printing you are doing, Epson UltraChrome™ HDR will give you quality unlike anything you have seen before.

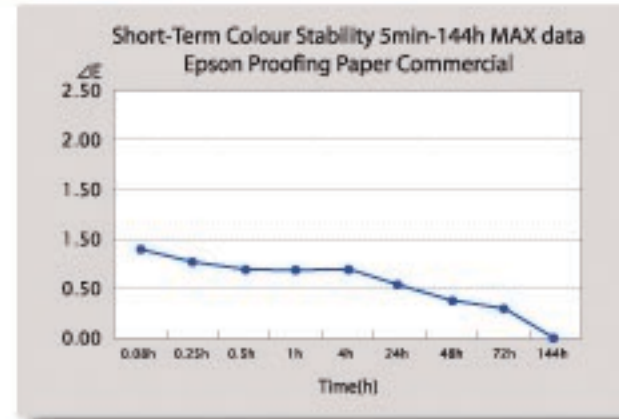

Addition of Green and Orange Further Expands the Colour Gamut

Epson UltraChrome™ HDR ink takes inkjet colour performance to an entirely new level with the addition of Green and Orange inks. This is particularly true in the vivid green to yellow and yellow to red portion of the colour space. Grass and foliage will be more vivid and natural, and orange tones like sunsets will be more dazzling. Photographers will be delighted to see that the orange ink also serves to lessen the graininess in skin tones.

Stabilises Quickly and Water-Resistant

Epson UltraChrome™ HDR Ink dries and stabilises in a matter of minutes. This is due to the use of specially formulated resin-encapsulated pigments, which also makes it extremely water-resistant.

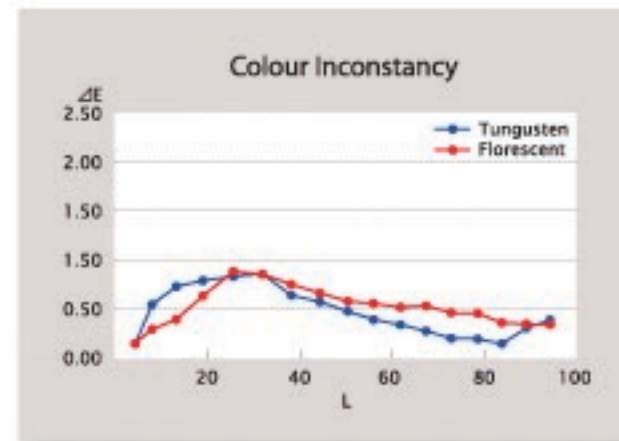

Accurate Colour Control

Highly accurate colour control ensures that there are virtually no differences in colour when printing at different resolutions, and that colour gradations are ultra-smooth and well-defined, even at high saturations. The beautiful, true-to-life reproduction of skin tones will show you the difference that Epson UltraChrome™ HDR makes.

Reduced Colour Inconstancy Ensures Uniform Appearance

The use of Epson UltraChrome™ HDR ink will completely overcome the problem of colour inconstancy (where colour appear different under different lighting). With a carefully developed formulation and three shades of black ink, consistent colour balance is assured regardless of the light source under which the print is viewed.

Higher Quality Complemented by Higher Productivity

Advanced Micro Piezo Thin Film Piezo Print Head (TFP™)

The Micro Piezo TFP™ featuring higher performance and greater durability has 360 micro-fine nozzles for each colour, delivering perfectly dot shapes with virtually no misting or satellites. Optimised for Epson UltraChrome™ HDR ink, it uses variable-sized droplet technology to produce different size ink droplets as small as 3.5 pico-litres (pl) which greatly reduces print time while optimising image quality. It also uses an ink-repellent coating that minimises clogging.

Faster Throughput Increases Your Work Efficiency

Printing on plain paper in all print quality modes is about twice as fast as previous Epson models.

Special Mode for Dot Proofing

A new 1440x1440 dpi mode (supported by Epson proofing media or selected 3rd party RIP software) delivers high quality proof sheets more than three times faster than the previous model. Supported by CMYK-half-tone mode, it delivers greater sharpness than older proofing modes.

1440x1440 mode

Automatic Nozzle Check System

Automatic Nozzle Check and Cleaning Maintains Print Quality

The auto nozzle check system uses advanced ink droplet detection (ink drops with an electrical charge are read by a sensor) to eliminate misprinting caused by nozzle clogging. This process takes less than 15 seconds, requires no media and consumes only a minuscule amount of ink. Nozzle checking can be performed before every job or can be set to run automatically between jobs during unattended printing.

Faster Cutting Speed and Efficiency with New Rotary Cutting Blade

Both printers employ a new rotary paper cutter that cuts entire sheet smoothly and cleanly in about 2 seconds. Furthermore, it is very durable and cuts through all media range including canvas and adhesive paper, eliminating the need for alternative manual cutters.

Paper Cut Button

Cutter

Innovative Easy Roll Paper Handling

Epson's new spindle-less flange makes paper loading a breeze. It comes with auto paper set/release and its adaptor can easily switch to support 2" core to 3" core paper roll. The single flange is suitable for most media types. A built-in intelligent roll paper feeding system automatically aligns and adjusts the paper for optimal tension during loading.

Barcode Printing Function

Before changing the roll of paper, you may print a barcode on the roll before it is removed. Barcode records the media ID (for genuine media) or an allocated number (for custom media) as well as the remaining length for easy media management.

New Epson LFP Remote Panel 2 Utility Software

Specially designed for Epson Stylus™ Pro 7900/9900, this software provides four convenient functions. The Firmware Updater connects to the web for automatic downloading of the latest printer, network and option firmware.

The Printer Watcher monitors and displays the status of any selected printer. The Paper Feed Adjuster fine-tunes the paper feed settings and the Custom Paper Setup registers new papers with user-defined names.

Easier Operation with Greater Flexibility

Large Capacity Ink System for Increased Efficiency

The availability of large capacity cartridges (in both 350ml and 700ml) will help improve productivity by reducing the need for frequent cartridge change especially for time-sensitive and/or large print jobs. The higher capacity is especially useful when printing is taking place overnight.

2.5" Colour Control Panel

Intuitively designed, the large 2.5" control panel features a 320x200 dot colour LCD, making it highly visible in any lighting condition. With the ability to check printer status at a glance, perform basic diagnostic and adjustments.

Epson Look-up Table (LUT) Technology Optimises Colour Quality

The Assurance of Maximum Colour Fidelity across the Spectrum

With the expanded colour gamut of the Epson UltraChrome™ HDR ink, achieving precise colour accuracy requires a significantly more complex conversion programme. Epson New LUT Technology is up to the challenge, maximising use of the colour gamut and improving ink utilisation by seamlessly integrating high-fidelity ink primaries. Developed through fundamental research conducted jointly with the Munsell Colour Science Laboratory at the Rochester Institute of Technology, Epson New LUT Technology not only reduces colour fidelity, it reduces graininess in skin tones, improves colour inconsistency, and ensures smooth gradations between colours.

About Look-up Tables (LUT)

To print a given colour on an inkjet colour printer, colour information (either RGB or CMYK) must be converted so that the printer knows which ink colours to blend, and in what amount. To perform the extremely complex calculations required for image data to ink conversion, a massive reference table of colour data called a LUT is used. Image quality is to a large extent determined by the choice of which ink colours to blend, and how much of each should be used.

Although the number of ink combinations possible with a 10-colour printer is virtually uncountable, Epson New LUT Technology automatically selects the optimum combination to accurately express the desired colour.

Additional Benefits of New LUT Technology

In addition to maximising use of the wide colour gamut and ensuring highest possible fidelity to the original image, Epson New LUT Technology provides three other major benefits that improve print quality.

Smooth Colour Gradations

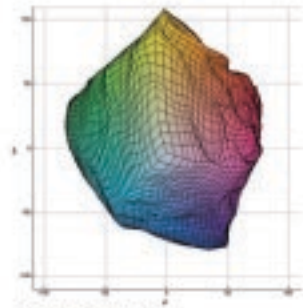

In many types of images, such as artistic photos and outdoor scenes, colours blend into one another. The smoothness of these gradations is a major factor in determining image quality. Epson new LUT Technology provides a smoother colour gamut for finely detailed gradations between colours.

Poor gradation

Good gradation

Colour gamut with non-smooth LUT gradation

Colour gamut with smooth LUT gradation

Consistent Quality in all Types of Light

Epson New LUT Technology also contributes to virtually eliminating colour inconsistency, so prints look similar under all light sources.

Light Source A

Light Source B

Graininess is No Longer Noticeable

Graininess is especially noticeable in skin tones in portrait or commercial photography. Epson New LUT Technology reduces graininess by optimising the fine colour dispersion in each pixel.

LUT with poor grain characteristics

LUT with good grain characteristics

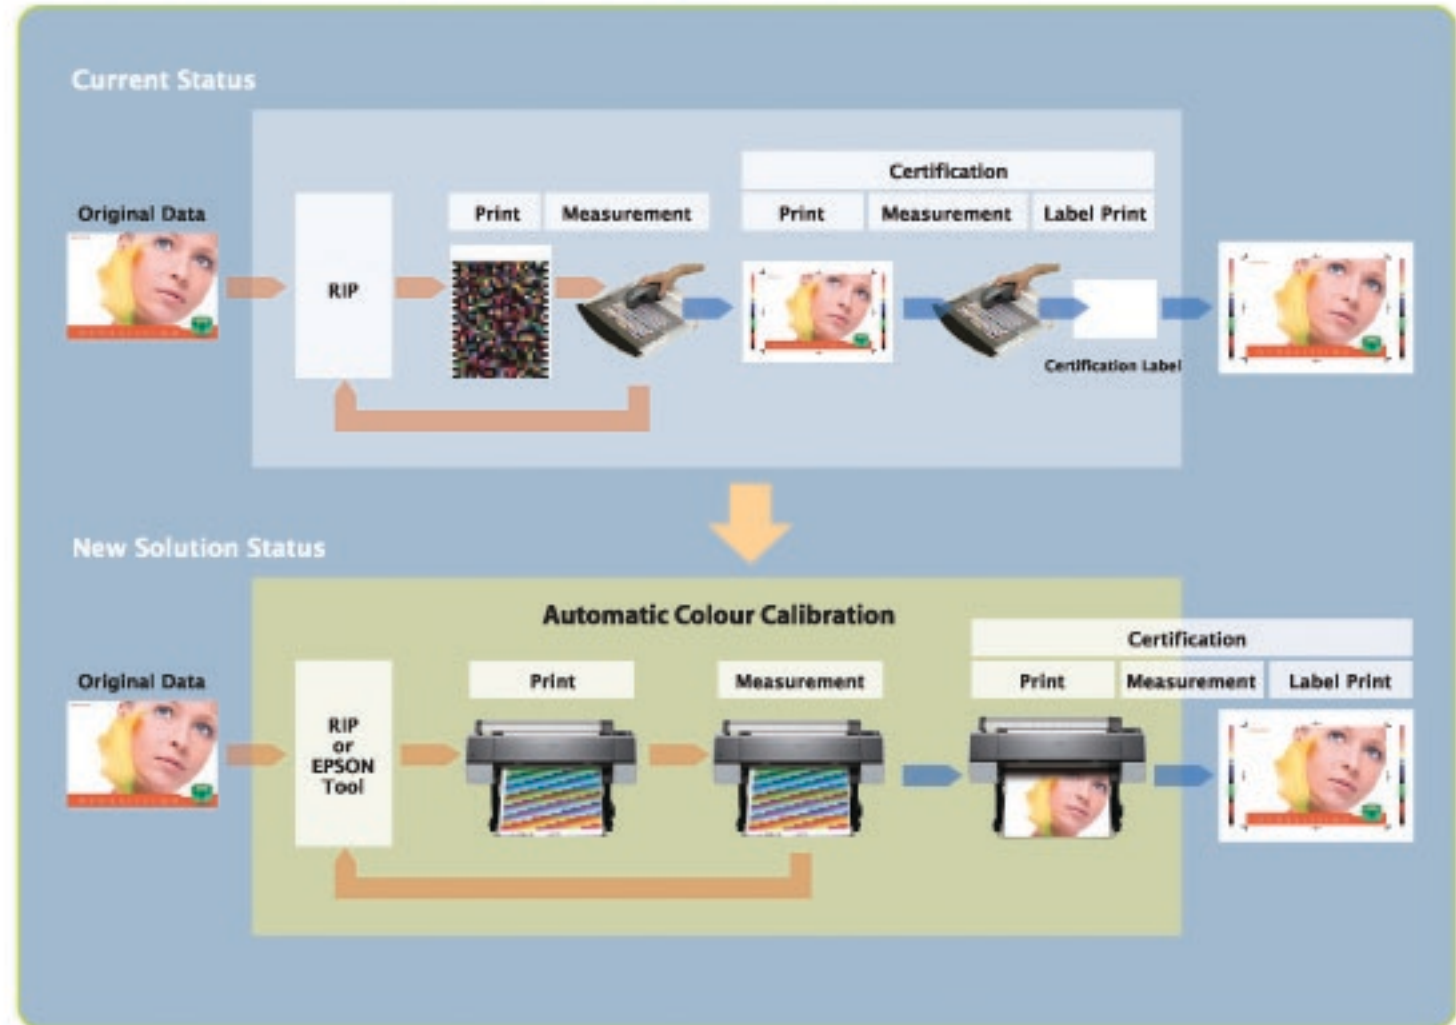

Epson SpectroProofer™ (Optional)

Automatic Colour Management Workflows

An advanced new option for the Epson Stylus™ Pro 7900/9900, SpectroProofer™ facilitates professional colour management workflows by performing colour calibration automatically. Incorporating industry-standard X-rite technology, it provides accurate printer-to-printer colour matching, as well as advanced measurement and certification. As programming colour management workflows are automated, operators need not be technically trained, resulting in faster speed, higher colour accuracy and lower costs.

SpectroProofer Enhances Colour Control Workflow

By using Epson's new SpectroProofer, the following colour control workflow can be precisely achieved:

Simple and Easy Operation

Compact Design

The SpectroProofer is designed for Epson Stylus Pro™7900/9900 – setup is fast and easy, and it fits right into the printer, so no additional space is required.

Fan

An on-board drying fan reduces drying time.

Bundled Software (SpectroProofer Utilities)

Best of all, Epson's special bundled software has a very simple, easy to use interface. This software virtually eliminates subtle colour differences in individual printer output. It can also record and export measured data in a universal format that can be used to create highly accurate ICC profiles. Auto calibration can be done with a step-by-step bundled in wizard.

Advanced Use

RIP Software

The SpectroProofer also works perfectly with third party RIP software for advanced colour measurement workflows and colour proofing, and depending on the RIP function, supports colour certification and spot colours.

Backing (Black/White) Filter

The optional SpectroProofer comes with inter changeable black/white backing to suit the need of any requirement.
